PROFILE

Frontend-first full-stack engineer who builds **pixel-perfect, high-performance interfaces** backed by production-grade systems. I ship React 19 dashboards with TypeScript strict mode, Web Workers for main-thread isolation, and real-time data visualization — then wire them to Python/FastAPI backends with ACID-compliant PostgreSQL. Whether it's a banking ledger UI, a meteorological map with live API sync, or an async engineering control suite, I own features from **Figma concept to deployed component**.

TECHNICAL SKILLS

Frontend (Primary)

React 19, Next.js, TypeScript (strict), Tailwind CSS, Vite, Web Workers, Leaflet Maps, Figma-to-Code

Languages

JavaScript (ES6+), TypeScript, Python, SQL, HTML5/CSS3

Blockchain & AI

Solana, Web3.js, Helius RPC, Pinecone, Ollama/LLMs

Backend & APIs

FastAPI, PostgreSQL, Redis, SQLAlchemy, RESTful APIs, Node.js

Security & Crypto

AES-256, ChaCha20, bcrypt, JWT, Client-Side Encryption

Infrastructure

Docker, Linux/WSL, Git/GitHub, CI/CD (Render, Vercel)

SELECTED PROJECTS — FRONTEND-FIRST

SyncOps — Async Engineering Workstation

[Live](#) | [Source](#)

Frontend Engineer | Apr 2025 – May 2025

React 19 TypeScript Vite Web Workers Tailwind CSS

- **Visual QA Workbench:** Built Figma overlay alignment system with fine-tune drift controls for design-to-code verification — detects pixel-level misalignment in real time
- **Web Worker Profiler:** Implemented main-thread isolation benchmarking 60 FPS under high-frequency array workloads (1M+ element arrays), preventing UI jank during heavy computation
- **Timezone Orchestrator:** Designed cross-border team availability mapper with live clock synchronization across EST, BST, WAT, and IST with overlap visualization
- Strict TypeScript mode with zero any types; component architecture optimized for re-render performance

CENTURION — Banking Ledger Dashboard

[Live](#) | [Source](#)

Full-Stack Engineer | Jan 2025 – Apr 2025

React Next.js Python FastAPI PostgreSQL Redis Docker

- **Dashboard UI:** Built multi-account dashboard with real-time balance cards, transaction history tables, and transfer flow with PIN authentication — all responsive, dark-themed, production-polished
- **Auth Flow:** Designed complete registration/login/PIN screens with bcrypt hashing, JWT session management, and form validation
- **Backend:** Architected ACID-compliant transaction engine with PostgreSQL row-level locking (with_for_update) and Redis idempotency keys to prevent double-spend
- Deployed on Render with Docker; handling live user signups

Auto-Tm NG — Real-Time Meteorological Dashboard

[Live](#) | [Source](#)

Full-Stack Engineer | Mar 2025 – Apr 2025

JavaScript REST APIs Leaflet Maps GNSS Live API Sync

- **Interactive Mapping:** Built real-time Leaflet map dashboard syncing live GNSS station data with atmospheric configuration panels and convective moisture monitoring

- **Data Visualization:** Implemented ZTD (Zenith Total Delay) calculations with station reference dropdowns and analysis execution workflows
- **API Integration:** Synced live meteorological REST APIs with client-side state management for real-time data refresh without page reload

VAULT-X2 — Client-Side Encryption Interface

[Live](#) | [Source](#)

Security Engineer | Feb 2025 – Mar 2025

JavaScript AES-256 ChaCha20 bcrypt

- Designed zero-knowledge encryption interface with drag-and-drop file handling, real-time progress indicators, and secure download flows
- Implemented AES-256 and ChaCha20 via Web Crypto API with password-derived keys — all encryption client-side, server never sees plaintext

WORK EXPERIENCE

Independent / Self-Directed

Jan 2025 – Present

Full-Stack Software Engineer — Frontend-First

Building and deploying production-grade interfaces and systems. Led frontend architecture for SyncOps (React 19/TypeScript dashboard with Web Workers), CENTURION (banking UI with real-time balance visualization), and Auto-Tm NG (interactive Leaflet mapping with live API sync). Backend systems include ACID-compliant PostgreSQL ledgers, client-side encryption modules, and Solana trading infrastructure. All deployed live with Docker on Render and GitHub Pages.

EDUCATION

Federal University of Technology, Minna — B.Eng Telecommunication Engineering

2019 – 2025
